

Calibration & Certification

Benefits

- Maintains machine accuracy of clamp, ejector, and injection unit position
- Maintains accuracy of system pressures and sensor readings
- Provides certification for your quality system's QS or ISO certification registrar information
- Maintains machine performance within process control

ISO9001:1994
QS-9000 – TE Supplement:1998
File # A1577

Activities Include

- Calibration of hydraulic pressures and valve spans
- Tuning of set points, ramps and closed loop control
- Testing of machine functionality to original performance specifications
- Verification of base level and platen parallelism
- Verification of proper operation of machine safeties
